

RS232/485/LAN Serial Communication Control

for LDT551V

1. Application

This document defines the communication protocols for serial control of the LDT551V.

-----Revision History-----

1st Release: May. 24 2011. H.Tanizoe, M.Juichiya, T.Kimura, Y.Ashizaki

2. Connectors and wiring

A: RS-232C connection

Connector: D-Sub 9-pin

Cable: Cross (reversed) cable or null modem cable

B: CAT5 (OPTION) RS-485 connection

PC to CAT5 Tx BOX

Connector: USB or D-SUB 9pin

Cable: USB (Standard A - Standard B) cable

or RS-232C (D-SUB 9pin) Cross (reversed) cable

(Three wired (TXD, RXD, GND) for Auto conversion mode only,
Full wired Cross cable for both of conversion mode)

Note: USB control is converted to RS-232C in before conversion to CAT5 RS-485 control in CAT5 Tx BOX. The CAT5 Tx BOX has the following two mode of RS-232C to RS-485 conversion.

(1) Auto conversion mode: Using simple RS-232C (3-wired) control, and full wired control.

(2) Legacy mode: Using full wired RS-232C control for half duplex signal control for RS-485.

Since the CAT5 serial communication function requires half duplex communication control by DTR and RTS control, the "Legacy mode" can't control with simple RS-232C cable. Please check Appendix B for more details.

C: LAN connection

Connector: Modular 8pin (RJ45)

Cable: Modular 8pin (RJ45), Strait CAT5/6/7 LAN cable

* If you connect one PC and one display without LAN HUB, you use Cross LAN cable.

Note: LAN control is converted to RS-232C control in the display.

3. Communication Parameter

Set each communication parameters to the PC connected with each kind of cable.

A: RS-232C connection

(1) RS-232C direct connection between PC and Display

Interface	RS-232C (Asynchronous, Full-duplex)
Baud rate	9600bps
Data length	8bits
Parity	None
Stop bit	1 bit
Flow control	None
Communication code	ASCII
Communication signals	TXD, RXD

B: CAT5 (OPTION) RS-485 connection

(1) USB connection between PC and CAT5 Tx BOX ('Control' switch is 'Legacy' mode or 'Auto' conversion mode)

Interface	RS-232C (Asynchronous, Half-duplex) via USB driver
Baud rate	9600bps
Data length	8bits
Parity	None
Stop bit	1 bit
Flow control	None
Communication code	ASCII
Communication signals	TXD, RXD, RTS (RTS is on 'Legacy' mode only.)

Note: Set the parameters on to USB driver properties. RTS is negative polarity.

(2) RS-232C connection between PC and CAT5 Tx BOX ('Control' switch is 'Legacy' mode or 'Auto' conversion mode)

Interface	RS-232C (Asynchronous, Half-duplex)
Baud rate	9600bps
Data length	8bits
Parity	None
Stop bit	1 bit
Flow control	None
Communication code	ASCII
Communication signals	TXD, RXD, DTR (DTR is on 'Legacy' mode only.)

Note: DTR is negative polarity.

C: LAN connection

(1) LAN connection between PC and Display

Interface	TCP/IP
DHCP client mode	Changeable (default = OFF: not using)
IP address	Changeable (default = 192.168.0.10: depends on model)
Subnet mask	Changeable (default = 255.255.255.0)
Default gateway	Changeable (default = 192.168.0.1: depends on model)
Port	3007/63007 (Both of those ports are available. Use 63007 only if you have no support of legacy products.)

3.1 Communication timing

The controller should wait for a packet interval before next command is sent.
 The packet interval needs to be longer than 600msec for the LDT551V.

[Important Information]

HOST system shall send next command after receiving a reply command from Monitor, if it is sequential commands communication. If Host doesn't wait for monitor's reply, monitor operation error may happen.

Time-out error handling operation in Controller: Host Controller shall wait the reply from Monitor, after sending command as mentioned above. The time-out setting in Host Controller shall be more than 30sec after sending command to Monitor. (Using the maximum command interval " a_{MAX} " is most safety.)

Communication disabled period after power on/off: After Monitor Power on, either by AC switch, Remote Controller or Serial communication command, Monitor goes initialize mode of controller and can not handle the remote control commands correctly during the mode. So do NOT send any command at least 14sec after monitor power on/off. If you make the code which sends any command after POWER ON/OFF command, please put a wait at least 14sec after sending the command.

About the other commands, please wait the each periods of command interval from PC. (See below example.)

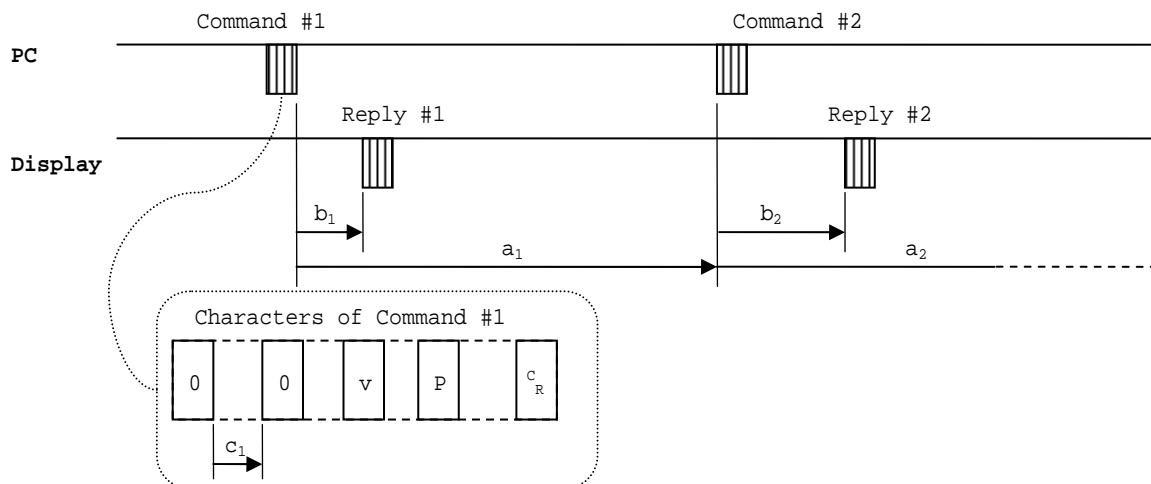

When your system may output no signal, you have to set the menu "POWER SAVE (PC)" to OFF because of 14sec waiting.

[Available Command list at DC power off status]

LDT551V can't accept and reply any command except for the following commands when it is in DC power off or power saving.

Power status Read / Read Model name Read / Serial number Read / Power on / Power off

Example of communication timing

* Command interval from PC (Wait sending next command for processing in display.)

$a > 14\text{sec}$: When Command #1 is power command "POWER ON", "POWER OFF".

$a > 5\text{sec}$: When Command #1 is video input command "INPUT D-SUB", "INPUT VIDEO", etc.

$a > 1.8\text{sec}$: When Command #1 is store the adjusted value command "SAVE CURRENT SETTINGS", "SAVE CURRENT SETTINGS QUICK".

$a > 6\text{sec}$: When Command #1 is "AUTO SETUP".

$a > 30\text{sec}$: When Command #1 is "FACTORY RESET", "SCREEN RESET". (This results in a_{MAX})

$a > 600\text{msec}$: When Command #1 is the others.

* Minimum reply time from display (Additional time depends on command processing in display)

$b = 10\text{msec}$ (Typ.): On RS-232C connection (The time depends on models as 10 to 20msec.)

$b = 140\text{msec}$ (Typ.): On RS-485 connection (The time depends on models as 90 to 140msec.)

$b = 30\text{sec}$ (max): When Command #1 is "FACTORY RESET", "SCREEN RESET".

* Command internal gap (Don't make a longer interval gap between characters.)

[Following 3 steps of time out period is selectable by OSD menu "CONTROL TIMEOUT" in CONFIGURATION2 menu on POWER ON mode. Although c is 5sec on POWER OFF mode and sleep mode.]

$c < 10\text{msec}$: Normal communication mode for time-out error of each character gap.

$c < 2\text{sec}$: Hand typing mode on teletype application.

$c < 30\text{sec}$: Hand typing mode with longer time-out.

(Infinity waiting isn't supported because of processing freeze.)

4. Communication Format

4-1. Basic command

This command set supports only the basic control of monitor and does NOT support multi monitor control by daisy chained connection. This command set will be written in the user's manual of LDT551V.

1) Control command diagram

The command is structured by the address code, function code, data code and end code. The length of the command is different for each function.

	Address code	Function code	Data code	End code
HEX	30h 30h	Function	Data	0Dh
ASCII	'0' '0'	Function	Data	↵

[Address code] 30h 30h (In ASCII code, '0' '0') fixed.

[Function code] A code of each fixed control move.

[Data code] A code of each fixed control data (number) and not always indicated.

[End code] 0Dh (In ASCII code, '↵') fixed.

2) Control sequence

(1) The command from a computer to the LCD monitor will be sent in 600ms.

(2) The LCD monitor will send a return command 600ms* after it has received and encoded. If the command isn't received correctly, the LCD monitor will not send the return command.

(3) The personal computer checks the command and confirms if the command, which has been sent, has been executed or not.

(4) This LCD monitor sends various codes other than return code. When having a control sequence by RS-232C, reject other codes from personal computers side.

*: The sending time of return command may delay depending on the condition (during changing of the input signal, etc.).

Example: Turn the power ON (' ' is for ASCII code)

Sending commands from the PC	Status code from LCD monitor	Meaning
30 30 21 0D '0' '0' '1' '↵'		Command for POWER ON
	30 30 21 0D '0' '0' '1' '↵'	Command received (Command echoed back)

Note: The replied status is for communication confirmation. When you want to know the display condition, please use the 'Read command'. (See page 6)

3) Operation commands

The operation commands execute the basic operation setting of this LCD monitor.

It may not operate when changing the signal:

Operation	ASCII	HEX
POWER ON	!	21h
POWER OFF	"	22h
INPUT HDMI	_r1	5Fh 72h 31h
INPUT DVI-D	_r2	5Fh 72h 32h
INPUT D-SUB	_r3	5Fh 72h 33h
INPUT BNC	_r4	5Fh 72h 34h
INPUT OPTION(CAT5)	_r5	5Fh 72h 35h
INPUT DisplayPort	_r6	5Fh 72h 36h
INPUT VIDEO	_v1	5Fh 76h 31h
INPUT DVD/HD	_v2	5Fh 76h 32h
INPUT S-VIDEO*	_v3	5Fh 76h 33h

* S-VIDEO is SEPARATE only

4) Read command

Host computer sends the command without Data-code to monitor.

After receiving this command, the monitor returns the command with Data-code of current status to host computer.

< ex. > When Host computer ask Power status of monitor, the status of monitor is powered-on.

Command from computer	Command from Monitor	Detail of command
30 30 76 50 0D '0'0'v'P'[enter]		Ask about the power status of monitor.
	30 30 76 50 31 0D '0'0'v"P"1'[enter]	Monitor is powered-on.

Structure of the Read-command

			ASCII		HEX	
			Function	Data (Receive)	Function	Data (Receive)
POWER	ON		vP	1	76 50	31
	OFF(sleep/stand by)		vP	0	76 50	30
Input	HDMI		vl	r1	76 49	72 31
	DVI-D		vl	r2	76 49	72 32
	D-SUB		vl	r3	76 49	72 33
	BNC		vl	r4	76 49	72 34
	OPTION(CAT5)		vl	r5	76 49	72 35
	DisplayPort		vl	r6	76 49	72 36
	Video		vl	v1	76 49	76 31
	DVD/HD		vl	v2	76 49	76 32
	S-VIDEO		vl	v3	76 49	76 33
Picture mode	HIGHBRIGHT		vM	p1	76 4D	70 31
	STANDARD		vM	p2	76 4D	70 32
Temperature of Internal monitor	Around Main board	resolution 1°C	tc1	(ex.) +25	74 63 31	2B 20 32 35
	Around Power PCB	resolution 1°C	tc2	(ex.) +31	74 63 32	2B 20 33 31

5) Remote command

(Not executable in sleep/standby mode. When the remote commands are sent while sleep/standby mode, the sleep/stand-by mode is only canceled.)

Some remote control operations can be achieved by the remote command codes. The remote commands have no data codes.

Button's name on remote	Function	
	Character	ASCII
+VOLUME	r06	72h 30h 36h
-VOLUME	r07	72h 30h 37h
AV MUTE	ra6	72h 61h 36h
AUTO SETUP	r09	72h 30h 39h

[Example] When executing the AUTO SETUP. (Figures and symbols enclosed in quotation marks are ASCII codes.):

Sending commands from the PC, etc.	Status code from the projector	Description
'30' '30' '72' '30' '39' '0D' 00r09 		Command operating the same as the MENU button
	'30' '30' '72' '30' '39' '0D' 00r09 	Command receipt confirmation (Command echo back)

Note:

When you use a terminal application with typing the codes by hands, DO NOT type BS (Back Space) key or the other control keys. The behavior may send unexpected codes in Sending command to the monitor. The communication may be rejected by the monitor, or the monitor may result in unexpected operation in the worst case.

4-2.Extended command

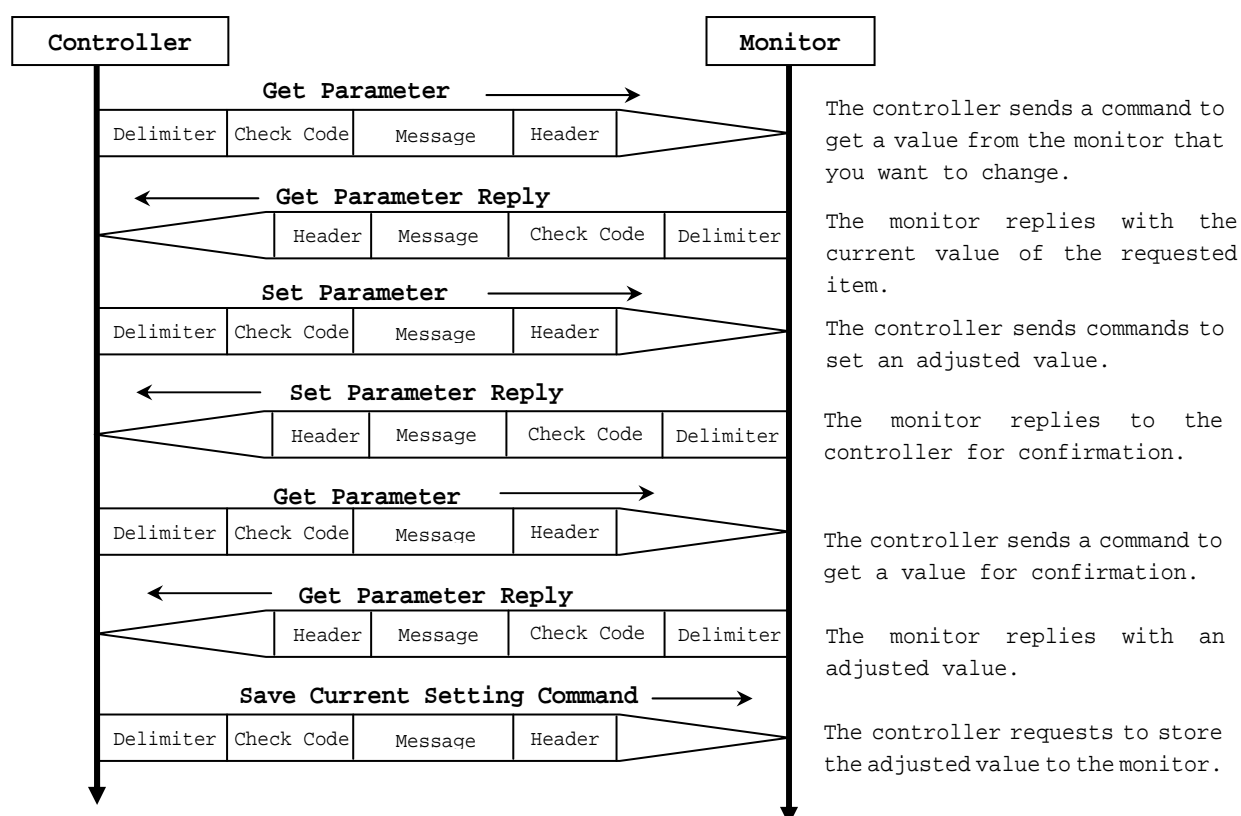

Note: This command set supports multi monitor control by daisy chained connection. This command set will NOT be written in the user's manual of LDT551V.

The command packet consists of four parts, Header, Message, Check code and Delimiter.

Header	Message	Check Code	Delimiter
--------	---------	------------	-----------

Sequence of a typical procedure to control a monitor is as follows,

[A controller and a monitor, two-way communication composition figure]

4.1 Header block format (fixed length)

Header						Message	Check code	Delimiter
SOH	Reserved '0'	Destination 'A'	Source	Message Type	Message Length			
1 st	2 nd	3 rd	4 th	5 th	6 th - 7 th			

1st byte) SOH: Start of Header
 ASCII SOH (01h)

2nd byte) Reserved: Reserved for future extensions.
 LDT551V must be ASCII '0' (30h)

3rd byte) Destination: Destination equipment ID. (Receiver)
 Specify a command's receiver's address.

If the command should be sent to certain monitor only, the either of character 'A' (41h) to 'Z' (5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion. If it is a broad cast command(only "set command" is available), then the '*' (2Ah) should be applied.

4th byte) Source: Source equipment ID. (Sender)
 Specify a sender address.
 The controller must be '0' (30h).

5th byte) Message Type: (Case sensitive.)
 Refer to section 4.2 "Message block format" for more details.

- ASCII 'A' (41h): Command
- ASCII 'B' (42h): Command reply.
- ASCII 'C' (43h): Get current parameter from a monitor.
- ASCII 'D' (44h): "Get parameter" reply.
- ASCII 'E' (45h): Set parameter.
- ASCII 'F' (46h): "Set parameter" reply.

6th - 7th bytes) Message Length:
 Specify the length of the message (that follows the header) from STX to ETX.
 This length includes STX and ETX.
 The byte data must be encoded to ASCII characters.
 Ex.) The byte data 3Ah must be encoded to ASCII characters '3' and 'A' (33h and 41h).
 The byte data 0Bh must be encoded to ASCII characters '0' and 'B' (30h and 42h).

4.2 Message block format

Header	Message	Check code	Delimiter
--------	----------------	------------	-----------

"Message block format" is allied to the "Message Type" in the "Header".

Refer to the section 6 "Message format" for more detail.

1) Get current parameter

The controller sends this message when you want to get the status of the monitor.

For the status that you want to get, specify the "OP code page" and "OP code", refer to "Appendix A. Operation code table".

"Message format" of the "Get current parameter" is as follows;

STX	OP code page		OP code		ETX
	Hi	Lo	Hi	Lo	

1) Refer to section 5.1 "Get current parameter from a monitor." for more details.

2) Get Parameter reply

The monitor will reply with the status of the requested item specified by the controller in the "Get parameter message".

"Message format" of the "Get parameter reply" is as follows;

STX	Result		OP code page		OP code		Type		Max value			Current Value				ETX
	Hi	Lo	Hi	Lo	Hi	Lo	Hi	Lo	MSB		LSB	MSB			LSB	

2) Refer to section 5.2 "Get parameter reply" for more details.

3) Set parameter

The controller sends this message to change a setting of the monitor.

Message format of the "Set parameter" is as follows;

STX	OP code page		OP code		Set Value				ETX
	Hi	Lo	Hi	Lo	MSB			LSB	

3) Refer to section 5.3 "Set parameter" for more details.

4) Set Parameter reply

The monitor replies with this message for a confirmation of the "Set parameter message".

Message format of the "Set parameter reply" is as follows;

STX	Result		OP code page		OP code		Type		Max value			Requested setting Value				ETX
	Hi	Lo	Hi	Lo	Hi	Lo	Hi	Lo	MSB		LSB	MSB			LSB	

4) Refer to section 5.4 "Set parameter reply" for more details.

5) Command

"Command message" format depends on each command.

Usually, this "command message" is used for some non-slider controls and some special operations, such as "Save current settings", "Get timing report", "power control", "Schedule", etc. Refer to section 5.5 "Commands message" for more details.

6) Command reply

The monitor replies to a query from the controller.

"Command reply message" format depends on each command.

Refer to section 5.5 "Commands message" for more details.

4.5 Check code

Header	Message	Check code	Delimiter
--------	---------	------------	-----------

Check code is the Block Check Code (BCC) between the Header and the End of Message except SOH.

		2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
SOH	D_0								
Reserved	D_1								
Destination	D_2								
Source	D_3								
Type	D_4								
Length	D_5								
STX	D_6								
Data	D_7								
ETX	D_n								
Check code	D_{n+1}	P	P	P	P	P	P	P	P

$$D_{n+1} = D_1 \text{ XOR } D_2 \text{ XOR } D_3 \text{ XOR } \dots \text{ XOR } D_n$$

XOR: Exclusive OR

Following is an example of a Check code (BCC) calculation.

Header							Message										Check code (BCC)	Delimiter
SOH	Reserved	Destination Address	Source Address	Message type	Message length		STX	OP code page		OP code		Set Value				ETX		
01	30	41	30	45	30	41	02	30	30	31	30	30	30	36	34	03	77	0D
D_0	D_1	D_2	D_3	D_4	D_5	D_6	D_7	D_8	D_9	D_{10}	D_{11}	D_{12}	D_{13}	D_{14}	D_{15}	D_{16}	D_{17}	D_{18}

$$\begin{aligned}
 \text{Check code (BCC) } D_{17} &= D_1 \text{ xor } D_2 \text{ xor } D_3 \text{ xor } \dots \text{ xor } D_{14} \text{ xor } D_{15} \text{ xor } D_{16} \\
 &= 30\text{h xor } 41\text{h xor } 30\text{h xor } 45\text{h xor } 30\text{h xor } 41\text{h} \\
 &\quad \text{xor } 02\text{h xor } 30\text{h xor } 30\text{h xor } 31\text{h xor } 30\text{h xor } 30\text{h} \\
 &\quad \text{xor } 30\text{h xor } 36\text{h xor } 34\text{h xor } 03\text{h} \\
 &= 77\text{h}
 \end{aligned}$$

4.6 Delimiter

Header	Message	Check code	Delimiter
--------	---------	------------	-----------

Packet delimiter code; ASCII CR(0Dh).

5. Message type

5.1 Get current Parameter from a monitor.

STX	OP code page		OP code		ETX
	Hi	Lo	Hi	Lo	
1 st	2 nd -3 rd		4 th -5 th		6 th

Send this message when you want to get the status of a monitor.

For the status that you want to get, specify the "OP code page" the "OP code", refer to "Appendix A. Operation code table".

1stbyte) STX: Start of Message

ASCII STX (02h)

2nd-3rdbytes) OP code page: Operation code page.

Specify the "OP code page" for the control which you want to get the status.

Refer to "Appendix A Operation code table" for each item.

OP code page data must be encoded to ASCII characters.

Ex.) The byte data 02h must be encoded to ASCII characters '0' and '2' (30h and 32h).

OP code page 02h -> OP code page (Hi) = ASCII '0' (30h)

OP code page (Lo) = ASCII '2' (32h)

Refer to Operation code table. (Appendix A)

4th-5thbytes) OP code: Operation code

Refer to "Appendix A Operation code table" for each item.

OP code data must be encoded to ASCII characters.

Ex.) The byte data 3Ah must be encoded to ASCII characters '3' and 'A' (33h and 41h).

OP code 3Ah -> OP code (Hi) = ASCII '3' (33h)

OP code (Lo) = ASCII 'A' (41h)

Refer to Operation code table.

6thbyte) ETX: End of Message

ASCII ETX (03h)

5.2 "Get parameter" reply

STX	Result		OP code page		OP code		Type		Max value				Current Value				ETX
	Hi	Lo	Hi	Lo	Hi	Lo	Hi	Lo	MSB			LSB	MSB			LSB	
1 st	2 nd -3 rd		4 th -5 th		6 th -7 th		8 th -9 th		10 th -13 th				14 th -17 th				18 th

LDT551V replies with a current value and the status of the requested item (operation code).

1stbyte) STX: Start of Message

ASCII STX (02h)

2nd-3rdbytes) Result code.

These bytes indicate a result of the requested commands as follows,

00h: No Error.

01h: Unsupported operation with this monitor or unsupported operation under current condition.

This result code from the monitor is encoded to ASCII characters.

Ex.) The byte data 01h is encoded to ASCII character '0' and '1' (30h and 31h).

4th-5thbytes) OP code page: Operation code page.

These bytes indicate a replying item's OP code page.

This returned value from the monitor is encoded to ASCII characters.

Ex.) The byte data 02h is encoded to ASCII character '0' and '2' (30h and 32h).

Refer to the operation codes table.

6th -7thbytes) OP code: Operation code

These bytes indicate a replying item's OP code.

This returned value from the monitor is encoded to ASCII characters.

Refer to the operation code table.

Ex.) The byte data 1Ah is encoded to ASCII character '1' and 'A' (31h and 41h).

8th -9thbytes) Type: Operation type code

This returned value from the monitor is encoded to ASCII characters.

Ex.) The byte data 01h is encoded to ASCII character '0' and '1' (30h and 31h).

00h: Set parameter

01h: Momentary

Like the Auto Setup function which automatically changes the parameter.

10th-13thbytes) Max. value: Maximum value which monitor can accept. (16bits)

This returned value from the monitor is encoded to ASCII characters.

Ex.) '0','1','2' and '3' means 0123h (291)

14th -17thbytes) Current Value: (16bits)

This returned value from the monitor is encoded to ASCII characters.

Ex.) '0','1','2' and '3' means 0123h (291)

18thbyte) ETX: End of Message

ASCII ETX (03h)

5.3 Set parameter

STX	OP code page		OP code		Set Value				ETX
	Hi	Lo	Hi	Lo	MSB			LSB	
1 st	2 nd -3 rd		4 th -5 th		6 th -9 th				10 th

Send this message to change monitor's adjustment and so on.

The controller requests a monitor to change value.

1stbyte) STX: Start of Message

ASCII STX (02h)

2nd-3rdbytes) OP code page: Operation code page

This OP code page data must be encoded to ASCII characters.

Ex) The byte data 02h must be encoded to ASCII '0' and '2' (30h and 32h).

Refer to the Operation code table.

4th-5th bytes) OP code: Operation code

This OP code data must be encoded to ASCII characters.

OP code 1Ah -> OP code (Hi) = ASCII '1' (31h)

OP code (Lo) = ASCII 'A' (41h)

Refer to the Operation code table.

6th-9th bytes) Set value: (16bit)

This data must be encoded to ASCII characters.

Ex.) 0123h -> 1st(MSB) = ASCII '0' (30h)

2nd = ASCII '1' (31h)

3rd = ASCII '2' (32h)

4th(LSB) = ASCII '3' (33h)

10th byte) ETX: End of Message

ASCII ETX (03h)

5.4 "Set parameter" reply

STX	Result		OP code page		OP code		Type		Max value				Requested setting Value				ETX
	Hi	Lo	Hi	Lo	Hi	Lo	Hi	Lo	MSB			LSB	MSB			LSB	
1 st	2 nd -3 rd		4 th -5 th		6 th -7 th		8 th -9 th		10 th -13 th				14 th -17 th				18 th

The Monitor echoes back the parameter and status of the requested operation code.

(If command is sent as "Broadcast" then no reply should be sent back.)

1st byte) STX: Start of Message

ASCII STX (02h)

2nd-3rd bytes) Result code

ASCII '0' '0' (30h, 30h): No Error

ASCII '0' '1' (30h, 31h): Unsupported operation with this monitor or unsupported operation under current condition.

4th-5th bytes) OP code page: Echoes back the Operation code page for confirmation.

Reply data from the monitor is encoded to ASCII characters.

Ex.) OP code page 02h -> OP code page = ASCII '0' and '2' (30h and 32h)

Refer to Operation code table.

6th-7th bytes) OP code: Echoes back the Operation code for confirmation.

Reply data from the monitor is encoded to ASCII characters.

Ex.) OP code 1Ah -> OP code (Hi) = ASCII '1' (31h)

OP code (Lo) = ASCII 'A' (41h)

Refer to Operation code table

8th-9th bytes) Type: Operation type code

ASCII '0''0' (30h, 30h): Set parameter

ASCII '0''1' (30h, 31h): Momentary

Like Auto Setup function, that automatically changes the parameter.

10th-13thbytes) Max. value: Maximum value that monitor can accept. (16bits)

Reply data from the monitor is encoded to ASCII characters.

Ex.) '0''1''2''3' means 0123h (291)

14th-17thbytes) Requested setting Value: Echoes back the parameter for confirmation. (16bits)

Reply data from the monitor is encoded to ASCII characters.

Ex.) '0''1''2''3' means 0123h (291)

18thbyte) ETX: End of Message

ASCII ETX (03h)

5.5 Commands

"Command message format" depends on each command. Some commands are shown with usage. Refer to section 7 to 10.

5.5.1 Save Current Settings.

The controller requests for the monitor to store the adjusted value.

STX	Command code		ETX
	'0'	'C'	

- Send "0C"(30h, 43h) as Save current settings command.
- Complete "Save Current setting" command packet as follows;
(The destination "A" (monitor ID of 1) is only an example. It should be changed according to the target monitor ID)

ASCII: 01h-30h-41h-30h-41h-30h-34h-02h-30h-43h-03h-CHK-0Dh

SOH-'0'-'A'-'0'-'A'-'0'-'4'-STX-'0'-'C'-ETX-CHK- CR

The monitor replies the packet for confirmation as follows;

SOH-'0'-'0'-'A'-'B'-'0'-'6'-STX-'0'-'0'-'0'-'C'-ETX-CHK- CR

5.5.1a Save Current Settings Quick.

The controller requests for the monitor to store the adjusted value.

This command supports only following items, in order to shorten execute time in monitor inside.

CONTRAST, BRIGHT, Color Temperature, IR Control, Information OSD, H-Position, V-Position, Sharpness, Black Level, Tint, Color, OSD Turn Off, Off Timer, OSD H-Position, OSD V-Position, Power On Delay, Gamma Selection, Tiling, Monitor ID, Clock, Clock Phase, Zoom, H-Resolution, V-Resolution.

STX	Command code		ETX
	'0'	'D'	

- Send "0D"(30h, 44h) as Save current settings quick command.
- Complete "Save Current setting" command packet as follows;

ASCII: 01h-30h-41h-30h-41h-30h-34h-02h-30h-44h-03h-CHK-0Dh

SOH-'0'-'A'-'0'-'A'-'0'-'4'-STX-'0'-'D'-ETX-CHK- CR

The monitor replies the packet for confirmation as follows;

SOH-'0'-'0'-'A'-'B'-'0'-'6'-STX-'0'-'0'-'0'-'D'-ETX-CHK- CR

5.5.2 Get Timing Report and Timing reply.

The controller requests the monitor to report the displayed image timing.

STX	Command code		ETX
	'0'	'7'	

- Send "07"(30h, 37h) as Get Timing Report command.
- Complete "Get Timing Report" command packet as follows;
(The destination "A" (monitor ID of 1) is only an example. It should be changed according to the target monitor ID)

ASCII: 01h-30h-41h-30h-41h-30h-34h-02h-30h-37h-03h-CHK-0Dh

SOH-'0'-'A'-'0'-'A'-'0'-'4'-STX-'0'-'7'-ETX-CHK- CR

The monitor replies status as the following format;

STX	Command		SS		H Freq.				V Freq.				ETX
	'4'	'E'	Hi	Lo	MSB			LSB	MSB			LSB	

- SS: Timing status byte
 Bit 7 = 1: Sync Frequency is out of range.
 Bit 6 = 1: Unstable count
 Bit 5-2 Reserved (Don't care)
 Bit 1 1:Positive Horizontal sync polarity.
 0:Negative Horizontal sync polarity.
 Bit 0 1:Positive Vertical sync polarity.
 0:Negative Vertical sync polarity.
- H Freq: Horizontal Frequency in unit 0.01kHz
- V Freq: Vertical Frequency in unit 0.01Hz
 Ex.) When H Freq is '1' '2' 'A' '9' (31h, 32h, 41h, 39h), it means 47.77kHz.

5.5.3 NULL Message

STX	Command code		ETX
	'B'	'E'	

The NULL message returned from the monitor is used in the following cases;

- A timeout error has occurred. (The default timeout is 10msec.)
- The monitor receives an unsupported message type.
- The monitor detects a packet BCC (Block Check Code) error.
- To tell the controller that the monitor does not have any answer to give to the host (not ready or not expected)

- Complete "NULL Message" command packet as follows;
 (The destination "A" (monitor ID of 1) is only an example. It should be changed according to the target monitor ID)

01h-30h-30h-41h-41h-30h-34h-02h-42h-45h-03h-CHK-0Dh

SOH-'0'-'0'-'A'-'A'-'0'-'4'-STX-'B'-'E'-ETX-CHK- CR

6. Typical procedure example

The following is a sample of procedures to control the monitor, these are examples of "Get parameter", "Set parameter" and "Save current settings".

6.1. How to change the "Brightness" setting.

Step 1. The controller requests the Monitor to reply with the current brightness setting and capability to support this operation. (Get parameter)

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'C'-'0'-'6'	STX-'0'-'0'-'1'-'0'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'A' (41h): Monitor ID

If the command should be sent to certain monitor only, the either of character 'A' (41h) to 'Z' (5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion. If it is a broad cast command(only "set command" is available), then the '*' (2Ah) should be applied.

'0' (30h): Message sender is the controller

'C' (43h): Message is "Get parameter command"

'0'-'6' (30h, 36h): Message length is 6 bytes

Message

STX (02h): Start of Message

'0'-'0' (30h, 30h): Operation code page number is 0

'1'-'0' (31h, 30h): Operation code is 10h (in the OP code page 0)

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

Step 2. The monitor replies with current Brightness setting and capability to support this operation.
 (If command is sent as "Broadcast" then no reply should be sent back.)

Header	Message	Check code	Delimiter
SOH-'0'-'0'-'A'-'D'-'1'-'2'	STX-'0'-'0'-'0'-'0'-'1'-'0'-'0'-'0'-'0'-'0'-'6'-'4'-'0'-'0'-'3'-'2'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'0' (30h): Message receiver is the controller

'A' (41h): Monitor ID

This portion should depend on the monitor ID of Monitor. ('A' (41h)-'Z' (5Ah))

'D' (44h): Message Type is "Get parameter reply"

'1'-'2' (31h, 32h): Message length is 18 bytes

Message

STX (02h): Start of Message

'0'-'0' (30h, 30h): Result code. No error

'0'-'0' (30h, 30h): Operation code page number is 0
 '1'-'0' (31h, 30h): Operation code is 10h (in the page 0)
 '0'-'0' (30h, 30h): This operation is "Set parameter" type
 '0'-'0'-'6'-'4' (30h, 30h, 36h, 34h): Brightness max value is 100(0064h)
 '0'-'0'-'3'-'2' (30h, 30h, 33h, 32h): Current Brightness setting is 50(0032h) as 50%
 ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

Step 3. The controller request the monitor to change the Brightness setting

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'E'-'0'-'A'	STX-'0'-'0'-'1'-'0'-'0'-'0'-'5'-'0'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'A' (41h): Monitor ID

If the command should be sent to certain monitor only, the either of character 'A'(41h) to 'Z'(5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion. If it is a broad cast command(only "set command" is available), then the '*' (2Ah) should be applied.

'0' (30h): Message sender is the controller

'E' (45h): Message Type is "Set parameter command"

'0'-'A' (30h, 41h): Message length is 10 bytes

Message

STX (02h): Start of Message

'0'-'0' (30h, 30h): Operation code page number is 0

'1'-'0' (31h, 30h): Operation code is 10h (in the page 0)

'0'-'0'-'5'-'0' (30h, 30h, 35h, 30h): Set Brightness setting 80(0050h) as 80%

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

Step 4. The monitor replies with a message for confirmation.

(If command is sent as "Broadcast" then no reply should be sent back.)

Header	Message	Check code	Delimiter
SOH-'0'-'0'-'A'-'F'-'1'-'2'	STX-'0'-'0'-'0'-'0'-'1'-'0'-'0'-'0'-'0'-'0'-'6'-'4'-'0'-'0'-'5'-'0'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'0' (30h): Message receiver is the controller

'A' (41h): Monitor ID

This portion should depend on the monitor ID of Monitor. ('A'(41h)-'Z'(5Ah))

'F' (46h): Message Type is "Set parameter reply"

'1'-'2' (31h, 32h): Message length is 18 bytes

Message

STX (02h): Start of Message

'0'-'0' (30h, 30h): Result code. No error

'0'-'0' (30h, 30h): Operation code page number is 0

'1'-'0' (31h, 30h): Operation code is 10h (in the page 0)
 '0'-'0' (30h, 30h): This operation is "Set parameter" type
 '0'-'0'-'6'-'4' (30h, 30h, 36h, 34h): Brightness max value is 100(0064h)
 '0'-'0'-'5'-'0' (30h, 30h, 35h, 30h): Received a Brightness setting was 80(0050h) as 80%
 ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

1. Repeat Step 1 and Step 2, if you need to check the Brightness setting. (Recommended)

Step 5. Request the monitor to store the Brightness setting. (Save Current Settings Command)

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'A'-'0'-'4'	STX-'0'-'C'-'ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'A' (41h): Monitor ID

If the command should be sent to certain monitor only, the either of character 'A'(41h) to 'Z'(5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion. If it is a broad cast command(only "set command" is available), then the '*' (2Ah) should be applied.

'0' (30h): Message sender is the controller

STX (02h): Start of Message

'0'-'C' (30h, 43h): Command code is 0Ch as "Save current settings"

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

6.2 How to read the measurement value of the built-in temperature sensors.

LDT551V has two built-in temperature sensors.

The controller can monitor inside temperatures by using those sensors through RS-232C.

The following shows the procedure for reading the temperatures from the sensors.

Step 1. Select a temperature sensor which you want to read.

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'E'-'0'-'A'	STX-'0'-'2'-'7'-'8'-'0'-'0'-'0'-'1'-'ETX	BCC	CR

Header

SOH (01h): Start of Header

'0' (30h): Reserved

'A' (41h): Monitor ID

If the command should be sent to certain monitor only, the either of character 'A'(41h) to 'Z'(5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion.

'0' (30h): Message sender is the controller

'E' (45h): Message Type is "Set parameter command"

'0'-'A' (30h, 41h): Message length is 10 bytes

Message

STX (02h): Start of Message
 '0'-'2' (30h, 32h): Operation code page number is 02h
 '7'-'8' (37h, 38h): Operation code is 78h (on page 2)
 '0'-'0'-'0'-'1' (30h, 30h, 30h, 31h): Select the temperature sensor #1 (01h).
 00h: No meaning
 01h: Sensor #1
 02h: Sensor #2
 ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

Step 2. The monitor replies for confirmation.

Header	Message	Check code	Delimiter
SOH-'0'-'0'-'A'-'F'-'1'-'2'	STX-'0'-'0'-'0'-'2'-'7'-'8'-'0'-'0'-'0'-'0'-'0'-'0'-'2'-'0'-'0'-'0'-'0'-'1'-ETX	BCC	CR

80:Cooling fan-1 abnormality

81:Cooling fan-2 abnormality

(3) The byte data 70 is encoded as ASCII characters '7' and '0' (37h and 30h).

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

12. Serial No. & Model Name Read

12.1 Serial No. Read

This command is used in order to read a serial No.

1) The controller requests the monitor to read a serial No.

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'A'-'0'-'6'	STX-'C'-'2'-'1'-'6'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'A' (41h): Monitor or ID

If the command should be sent to certain monitor only, the either of character 'A' (41h) to 'Z' (5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion.

'0' (30h): Message sender is the controller

'A' (41h): Message type is "Command"

'0'-'6' (30h, 36h): Message length.

Message

STX (02h): Start of Message

'C'-'2'-'1'-'6' (43h, 32h, 31h, 36h): Serial No. command

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

2) The monitor replies a data for confirmation. (If command is sent as "Broadcast" then no reply should be sent back.).

Header	Message	Check code	Delimiter
SOH-'0'-'0'-'A'-'B'-N-N	STX-'C'-'3'-'1'-'6'- Data(0)-Data(1)---Data(n)-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'0' (30h): Message receiver is the controller

'A' (41h): Monitor ID

This portion should depend on the monitor ID of Monitor. ('A' (41h) - 'Z' (5Ah)).

'B' (42h): Message type is "Command reply "

N-N: Message length.

Note.) The maximum data length that can be written to the monitor at a time is 32bytes.

Ex.) The byte data 20h is encoded as ASCII characters '2' and '0' (32h and 30h).

Message

STX (02h): Start of Message

'C'-'3'-'1'-'6' (41h, 33h, 31h, 36h): Serial No. reply command

Data(0)-Data(1)---Data(n): Serial Number

(4) The data must be ASCII characters strings.

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

12.2 Model Name Read

This command is used in order to read the Model Name.

1) The controller requests the monitor to read Model Name.

Header	Message	Check code	Delimiter
SOH-'0'-'A'-'0'-'A'-'0'-'6'	STX-'C'-'2'-'1'-'7'-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'A' (41h): Monitor ID

If the command should be sent to certain monitor only, the either of character 'A' (41h) to 'Z' (5Ah) which is corresponding to monitor ID from No1 to No.26 should be set to this portion.

'0' (30h): Message sender is the controller

'A' (41h): Message type is "Command"

'0'-'6' (30h, 36h): Message length.

Message

STX (02h): Start of Message

'C'-'2'-'1'-'7' (43h, 32h, 31h, 37h): Model Name command

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

2) The monitor replies a data for confirmation. (If command is sent as "Broadcast" then no reply should be sent back.)

Header	Message	Check code	Delimiter
SOH-'0'-'0'-'A'-'B'-N-N	STX-'C'-'3'-'1'-'7'-Data(0) -Data(1)---- -Data(n)-ETX	BCC	CR

Header

SOH (01h): Start Of Header

'0' (30h): Reserved

'0' (30h): Message receiver is the controller

'A' (41h): Monitor ID

This portion should depend on the monitor ID of Monitor. ('A' (41h) - 'Z' (5Ah)).

'B' (42h): Message type is "Command reply "

N-N: Message length.

Note.) The maximum data length that can be written to the monitor at a time is 32bytes.

Ex.) The byte data 20h is encoded as ASCII characters '2' and '0' (32h and 30h).

Message

STX (02h): Start of Message

'C'-'3'-'1'-'7' (41h, 33h, 31h, 37h): Model Name reply Command

Data(0) -Data(1)----Data(n): Model name

(5) The data must be ASCII characters strings.

ETX (03h): End of Message

Check code

BCC: Block Check Code

Refer to the section 4.5 "Check code" for a BCC calculation.

Delimiter

CR (0Dh): End of packet

Appendix

A. Operation Code (OP code) Table

[Note: Do not send any code to monitor except for the codes in following table.

If you sent any "undefined" code to monitor, it may cause error of Monitor operation.]

	Item	OP code page	OP code	Parameter	Remarks
PICTURE	Brightness	00h	10h	0: dark MAX.: bright

CONTROL LOCK	CONTROL LOCK of Front button and IR control (ON/OFF)	00h	E3h	0: UNLOCK(Off) 1: LOCK(ON)	This LOCK is unlocked in the same manner as LOCK status of IR CONTROL.

B. Application Note for RS485 based communication using CAT5 Tx BOX. (Legacy mode only)

- 5) RS-485 is half-duplex communication. So data flow control in HOST side is required.
- 6) Data flow control is done by following procedure.

HOST send data to Monitor while both of RTS and DTR signal is "LOW" (Clear) status.
 HOST receive data from Monitor while RTS signal is "HIGH"(Set) status.

- 7) Following chart shows more detailed timing of data flow control by RTS.

- a: setup time of TxD by HOST: up to programming
 b: Data transmission time of TxD by HOST: up to data length
 c: Margin time of TxD period by HOST: up to programming
 d: Reply preparation time by Monitor =approx.140msec(min)

HOST PC should keep RTS signal "LOW" while above (b) period at least. (a) and (c) is required in order to make reliable communication between HOST and Monitor.

- 8) Example of programming.

System:

Case1:OS:Windows XP Professional SP2, CPU:Centrino Duo 1.66GHz

Case2:OS:Windows XP Home SP1, CPU: Pentium4 2.8GHz

Case3:OS:Windows XP Professional SP2, CPU:Pentium3 933MHz

Procedure:

```
///
/// Send Data ///
....
EscapeCommFunction(hFile,CLRRTS) ; CLEAR RTS & DTR
SLEEP(20) ; put 20msec delay for above "a: setup time of TxD by HOST".
WriteFile() ; Data transmission of TxD
SLEEP(70) ; put 70msec delay for above "c: Margin time of TxD period by HOST".
EscapeCommFunction(hFile,SETRTS) ; SET RTS& DTR
....
/// Receive Data (Ex. by Polling timer at 100msec interval)///
....
ReadFile() ; Data Receive of RxD
....
///
----- end of document-----
```

C. Application Note for LAN based communication

The RS-232C command code is been able to execute on LAN.

When you make your application program, you use socket port as a TCP/IP client.

Please refer general technical documents (commercially available) of network control.

Preparation of system setup

- (1) Connect with the PC, the displays and LAN HUB with LAN cable. (See page 2.)
- (2) The Main Power Switch (AC) of the display is ON. So the modes of the display are Power On, Power Off or Sleep/Standby.
- (3) The PC is on.
- (4) Set the OSD menu "LAN SETTING".

DHCP CLIENT

Select whether to use DHCP client or not.

Select OFF when not using it, and select ON when using it.

IP ADDRESS

Set the IP address of the monitor.

Default address is 192.168.0.10. (It depends on model.)

SUBNET MASK

Set the gateway mask.

Set it to 255.255.255.0 for normal use.

DEFAULT GATEWAY

Set the IP address of the gateway router to externally connect the local area including the monitor.

Default address is 192.168.0.1. (It depends on each model.)

- (5) Read the OSD menu "LAN SETTING" for control program.

PORT

Read the port number.

Default number is 63007. (It depends on model.)

Communication protocol order

- (1) Open socket port '63007' of the display IP address on the PC as a TCP/IP client.
(On Windows PC, the port is "Winsock". On Linux PC, the port is "socket".)
- (2) Send RS-232C command code on TCP/IP protocol from the PC.
(Sending 'Read command' at first is recommended for confirming communication condition and display condition.)
- (3) Receive RS-232C command code on TCP/IP protocol from the display.

Note: This LAN command protocol has no NETWORK CERTIFICATION feature. When you don't use in private network, you may change the IP address sometimes for low level security.
